

Satellite radio has been a great help to me with the large of amount of long distance driving that I do. The only reason the NAB is trying to hinder the success of satellite radio is for financial gain and the bottomline should not come down to who has the best lobbyist, but what is in the best interest of the general public. Think of many new ideas and where they would be if lobbyist were able to hinder there start and prevent them from fully developing. Turn down the NABs push for control over a new industry.
